Organisms and Their Environment - Part 2

Big Idea: All living things are affected by their environment. Both the living and non-living parts of an environment can have impacts on the well-being of an organism.

INTERACTIONS BETWEEN ABIOTIC AND BIOTIC PARTS OF THE ENVIRONMENT:

Ecology:

Scientists who study ecology are called _____.

Ecosystem:

Pond Ecosystem:

ABIOTIC	BIOTIC

CANADA's BIOMES:

BIOME NAME	FEATURES
Tundra	
Boreal Forest	
Temperate Forest	
Grasslands	

B.C.'s ECOSYSTEM:

_____ % of Canada's mammals, _____% of Canada's plants, _____ % of Canada's fungal species, and _____ % of Canada's birds can be found living in British Columbia.

B.C.'s ECOPROVINCES:

BC has diversity in its geography and climate which contributes to the biodiversity of BC's ecosystem.

B.C. has _____, _____, _____ and vast plains. There are 10 different natural regions in B.C, called ecoprovinces. The ecoprovince Kelowna is located in is called _____.

ABORIGINAL PERSPECTIVES:

B.C's Aboriginal people were considered to be our first _____.

Ecosystems are a _____ not a collection of _____.

All parts of the ecosystem are _____, _____ and _____.
